

Thomas Jefferson Powerpoint Bullets for 6/22/2010
Operational Period 6/21/2010 Sampling Period

- Three stations, TJ54 – TJ56, were sampled during the operational period.
- All stations were sampled for: TPH, VOAs, and oil dispersion (CTD fluoremetry and dissolved oxygen).
- No samples were collected for bioassay using the Rototox test.
- Significant fluorescence found at Station 54 at the 8-10m level, correlating to an decrease in DO. Also, TJ56 showed the possibility of fluorescence at 13 & 15 meters.
- Station TJ56 showed a decrease in DO at a depth of approximately 20m that was not associated with a fluorescence signal.
